

How to proceed your robot to clinical research

Dr. Kiyoyuki Chinzei

Leader, Surgical Assist Technology Group
National Institute of Advanced Industrial Science and Technology
(AIST)

日時: 2012年3月7日(水) 10:00-11:00

会場: 東京大学工学部2号館 2F 221 講義室

Recent top conferences demand your ideas have been tested in clinical environment. Before going clinical, you must first obtain IRB (Institutional Review Board) clearance. But what you most do to go to IRB? In this talk a Japanese guidance for "Navigational Aid Systems" will be introduced. This guidance discusses about design and bench-test requirements as well as dry-run in OR (operating room) setting. It is not specifically written for German IRB requirement though we expect German participants to this seminar - I am happy if we can discuss about what German regulation requires and not.

I will also briefly introduce some research activities of our group.
