School of Engineering
Doctor Course Inter-Departmental Education Program
“Mechanical Systems Innovation” (GMSI)

GMSI Program Leader
Shigeo MARUYAMA

1. Goal

By continuing the educational programming of the Global COE Program “Mechanical Systems Innovation” – the aim of which was to develop creative human resources to be future global leaders – we establish a series of lectures and academic exercises for the study of frontier technical areas.

The core courses Engineering Literacy I, II, and III will cultivate skills in communication, information and ethics, and Engineering Competency I, II, and III will cultivate proficiency in leadership, problem setting /resolution/execution, responsibility, sense of duty, etc.

By cultivating literacy and competency in addition to fundamental attainment and specialized knowledge, our goal is to train tough, internationally competitive young leaders who will be able to lead in both academic and industrial aspects of their respective fields. We seek students from all engineering fields, not limited just to one specific field of study, to participate in this newly implemented inter-departmental graduate program. Those who meet the program requirements will be awarded a certificate of completion.

This program will not provide any RA salary, but participation in this program may be taken into consideration during selection and evaluation of other financial support programs, such as the UT Graduate School of Engineering’s Doctoral Student Special Incentives Program (SEUT Fellowship A,B) etc. (may not apply to all departments.)
